

JAVAC's AA Pack

In the current economic climate, workshops and business owners are looking to expand their servicing capacity with minimum outlay. JAVAC manufacture and supply high quality service equipment in economically priced starter packs which include the essential tools to get started.

A long time favourite in the industry, JAVAC offer the AA Pack which includes a charging trolley, recovery unit and leak detector. The charging trolley is an RCS-31, comprising of an 80kg scale, 4 way manifold, a 45 litre p/m 2 stage

vacuum pump and a chain to secure your gas bottle; all built onto an easily transportable trolley. This kit also has the EVOos recovery unit, with integrated oil separator. Then there is the reliable Tek-Mate leak detector which has heated diode leak detection technology. All this comes in the affordable JAVAC AA Pack which can be running within 15 minutes.

Mazda Techs Cool Under Pressure

Mazda technicians recently competed in Mazda's biennial technician skills contest, Maztech. The country's top eight technicians pitted their considerable experience against each other and a selection of technical challenges devised by Mazda Australia's technical training team and field staff.

Each state recently held a regional Maztech final in order to find the best local technicians with the top two each from Queensland, New South Wales and Victoria / Tasmania progressing to the national Maztech final along with the best from South Australia and Western Australia. In total, eight technicians from across the five mainland states won through from over 1300 qualified technicians currently employed in the Mazda dealer network.

The final was held recently at Mazda Australia's Melbourne head office and consisted of a number of practical tests including engine and body electrical fault diagnosis and various on-bench mechanical tests. A further aspect required the technicians to answer 40 questions to test their theoretical knowledge and ability to source information from technical manuals.

During the contest, all eight finalists demonstrated the skills that had taken them to this stage of Maztech but in the end the title of 2010 MazTech winner went to Brian Bernier of Wippels Autos in Toowoomba. Second place was Nick Ingram of Melville Mazda in Perth and third was Todd Fletcher of West End Mazda in Sydney.

LEAK DETECTION MADE EASY

with

**HIGH RESOLUTION
UNIVERSAL UV DYE**

and

**87DC UV LED LIGHT FOR
CLOSE-UP INSPECTION**

- ✓ Flashes into refrigerant as mist for instant distribution
- ✓ Does not contain POE oil
- ✓ Highly stable - will not crystallise with moisture

Uniquely engineered lens and reflector focuses beam from these lights into one powerful dye seeking energy force.

- ✓ Cordless and Rechargeable
 - ✓ 5 hours of use from a full charge
 - ✓ Features low battery indicator
- Includes AC and DC charger

Clean, no mess injection every time - No dye injector needed
