

Automotive News

May 2011

Welcome to the first issue of Automotive News, a newsletter that will be published monthly. The purpose of this newsletter is to share information about automotive air conditioning equipment, technical information and industry relevant news. We hope you find this newsletter informative. If at any time you have suggestions or insights, please feel free to contact us.

Compliance testing for your air conditioning service tools

As most people in the industry are aware, refrigerant recovery from automotive and refrigeration air conditioning systems has become very important in the day to day workshop environment.

It is imperative and also law that a technician be correctly equipped to deal with refrigerant recovery. The company needs to be compliant and certified to be able to complete such recovery tasks.

Did you know that all technicians should have an electronic leak detector, recovery unit and vacuum pump? And don't forget that they must be regularly tested and serviced to ensure they are in good working order.

These tools of the trade have been declared mandatory by the regulatory organisation within Australia who can and will demand records showing that you regularly maintain these tools. To assist with maintaining these stringent laws, JAVAC has announced their strategy to assist refrigerant users to remain compliant according to these legislations. JAVAC is one of Australia's leading manufacturers and suppliers of vacuum and recovery; and understands the importance of having your tools of the trade ready for work at any time.

Many people within the industry are aware of JAVAC as a manufacturer, but did you know that they have a fully equipped service centre to deal with most brands of automotive refrigeration service tools? An all in one service centre will offer greater flexibility and convenience to many service agents who, in the past, may have sent their tools to multiple service centres in various locations.

Now you can send your leak detector, vacuum gauges, vacuum pump, recovery machine and charging scales in for test or service to the one service centre and rest assured that you will be given quality service and quick turn around; from a basic compliance test to a full overhaul.

New Product Release

Konfort 700 Series

From the 1st January 2011 all newly approved cars under the EEC legislation should use the new refrigerant R1234yf in their AC system. This new gas, with lower environmental impact, will progressively replace the traditional R134a. Due to this long term change over, there will be a long period where technicians will deal with both types of refrigerants.

JAVAC's latest innovation, the Konfort 700R Series, will allow workshops to purchase a professional service station that will give them the capability to easily deal with both refrigerants without the excessive cost of ownership.

The Konfort 720R model can be purchased to operate with either R134a or the new R1234yf. Thanks to an optional retrofittable kit, your workshop can easily convert a R134a Konfort to a R1234yf Konfort.

KONFORT 720R- The KONFORT 720R is designed to operate on cars, commercial vehicle, industrial and agricultural systems. It comes with automatic functions for the recovery and recycling of refrigerant and the recovery of oil. The quantities of oil and UV tracer are controlled by an automatic valve, leaving the operator just few simple manual operations.

KONFORT 760R - KONFORT 760R BUS (FOR LARGER SYSTEMS) This models are equipped with a high visibility colour TFT display, and an easy to understand user interface. All the service functions are fully automated, without the use of any manual taps.

KONFORT 780R BI-GAS - This model represents the top of the 700R series range, the best available on the market. The 780R version is the same size as the other machines, yet has two tanks and two separate circuits for recovery, recycling and refilling, so you can work with both refrigerants (the "old" R134a and the "new" R1234yf) simultaneously.

Automotive Air Conditioning Starter Packs

JAVAC have developed some great new package deals to get your job done quickly, easily and economically.

- ✓ Perfect for those just starting out
- ✓ Affordable way to expand servicing capacity
- ✓ Designed with the tradesman in mind
- ✓ Products comply to Australian standards
- ✓ Packages may assist with compliancy
- ✓ Various packages available
- ✓ Prices kept to a minimum
- ✓ Essential tools included
