

04 JAVAC's Reco GT recovery system

JAVAC has developed the Reco GT recovery system, which can be customised to suit specific building projects.

According to the company, the unit has the ability to recover up to 400kg of R134a per hour and is suitable for most refrigerants in the CFC, HFC and HCFC families.

The Reco GT features PLC integration and can be fitted with leak detection sensors and platform scales for refrigerant tanks. The system also has a recharge module. Visual and audible detection warnings are available.

For more information, visit www.javac.com.au or visit the company at ARBS stand 434/437. ■
