

# Automotive Recovery is simple with JAVAC

**R**efrigerant recovery is an extremely important part of our work, as we are, as an industry, trying to minimise the environmental impact and ensure the long term health of the public.

How can the average workshop easily recover, recycle and re-use refrigerant gas confidently? There are several machines on the market that can do all of these tasks. JAVAC has a range of tools to suit all budgets and workshops, from the one man service van to the commercial workshop environment.

The Konfort automotive air conditioning charging station is a fully automatic unit which includes the refrigerant charging data and compressor oil specifications for

most of today's vehicles. Also with the ability to log refrigerant recovered and vehicles charged; a built in printer gives details of all data processing.

JAVAC also offer the RCS, a manual automotive charging trolley fitted with a 2 stage vacuum pump, 4 valve manifold and 80kg capacity scales with 10 gram increments, this unit is definitely value for money.

For those who want something light weight and portable, JAVAC's PCS-2 covers all the bases. Incorporating 3 essential tools in one hand held unit, it comprises of detachable digital scales, vacuum pump and 4 valve manifold.

For those just setting up, or wanting to fit out additional vehicles, JAVAC has the AA starter pack, including

all the essential tools to begin a job. Comprising of a hand held leak detector, portable recovery unit and RCS trolley, this package makes your job easy.

Another important factor for the automotive technician is keeping his tools of the trade maintained and ready for work at all times. JAVAC offer a compliance check where they can make sure these tools comply to the stringent guidelines put in place by the governing regulatory body. Above and beyond compliance testing, JAVAC also offer regular servicing and repair of these tools, with the ability to service other brands as well as their own.
