

Portable Charging Station

The PCS-2a portable charging station is a compact, light weight and economical tool suitable for any automotive tradesperson's tool kit. This charging station has three tools in the one unit, making it suitable for light vehicles and mobile servicing.

The PCS-2a portable charging station incorporates detachable 80kg capacity digital scales, a light weight 2-stage vacuum pump and 4-valve manifold; with adaptors to suit the automotive industry.

The PCS-2a is ideal where you are required to accurately evacuate and charge systems to manufacturers' specifications. An integrated fan cooled casing allows the PCS-2a charging station to operate in environments of high ambient temperature. For operator convenience, an inbuilt manifold allows the user to quickly evaluate suction, discharge,

pressure and temperature readings.
